

## **Pavement & Road Construction Services**

GreenMarket Solutions, Inc offers consultation and training services for the proper application of the GMS Soil Stabilizer product toward the preparation or restoration of sub-base, base or top layers for pavement and road construction.

GreenMarket Solutions, Inc also offers injection treatment services for residential and small commercial properties.

### **Common applications**

- New and existing paved surfaces
- Logging roads and rural country roads
- Parking lots & driveways
- Construction sites
- Airports

### **Benefits of Using GMS Soil Stabilizer**

- Reduces soil expansiveness
- Increases load bearing capacity
  - Provides soil stability for heavy equipment traffic on construction sites
- Prevents common stabilization problems
  - Roadways: Reduces the occurrence of ruts, frost heaves, pot holes, and related problems
- Reduces construction costs
  - Sub-grade stability reduces need for excavation and thickness of aggregate and other road building materials (road thickness)
- Limits dust and surface material loss
- Lowers road maintenance costs
- Environmentally friendly
  - Products are designed to maximize the potential of soil's characteristics while eliminating the generation of hazardous substances.
  - Processes allow energy and resource conservation
